The Amendment of Item Selections form is used by depository libraries to update their item selection profiles. Libraries may drop item numbers from their item selection profile at any time. Drops become effective within 3 days. Libraries may only add item numbers to their item selection profile during the annual item selection update cycle, which usually runs June 1 through July 31 of each year. Adds become effective on October 1st, or, the beginning of the new Federal fiscal year.

You must use your library's internal password in order to make changes to your item selection profile. If you do not know your internal password, submit a question through askGPO .
