What will the libraries get from MARCIVE and GPO?

Participating libraries will be able to choose from four possible scenarios for the monthly load:

* All new records in the set according to their pilot profile;
* All new records, plus changed or updated records;
* All EL only according to their pilot profile; or
* All historic Shelflist records, as they are created by GPO (Please see FAQ #17 for more information). Two options are available for those who would like those records:
  1) All records cataloged OR
  2) All records by agency (i.e. All A's = All records from the Department of Agriculture or all Y's = All Congressional Documents) Note: No further breakdown will be offered by SuDoc stem. You can profile for multiple agencies.

Note: MARCIVE will issue libraries a notice of record availability, quantity of records, and location where they may be retrieved.
