

The WEBTech Notes database is a compilation of cataloging change notifications that have been distributed through the [Administrative Notes Technical Supplement](#) . Libraries use this database to identify changes in call number, item numbers, and other catalog record issues.

NOTE: The database application has failed and as an interim solution to the restoration of a searchable WEBTech Notes application, an Excel file containing the WEBTech Notes dataset has been made available. The full dataset from January 1994 through the present, and selected data from 1991 to 1994, is now available in this [Excel file](#) .
