

SPRING 2025 DEPOSITORY LIBRARY COUNCIL VIRTUAL MEETING

MAY 1, 2025 • #DLCVIRTUAL25

A Consortial Cataloging Records Success Story

Angela Bonnell
Head of Government Information and Maps
Milner Library, Illinois State University

Climate

- Managing catalog records and discovery of digital Federal Depository Library Program (FDLP) publications are topics that have often raised questions and concerns.
- The transition to a digital-first FDLP has made these issues more pressing.

Challenge

Cataloging Record Distribution Program (CRDP)

- GPO announced 8/15/2024 that the program would cease effective March 2025

MARCIVE, Inc.

- MARCIVE, Inc. announced 9/5/2024 it would cease operations at the end of December 2024 and CRDP would also cease at the end of December 2024

- The Consortium of Academic and Research Libraries in Illinois (CARLI) consists of 126 governing member institutions
 - CARLI manages the I-Share Union View catalog and 94 I-Share member library local catalogs that run on Primo VE
 - 41 of 48 Federal Depository Libraries in Illinois are CARLI members
 - 33 FDLs have collections represented in I-Share

Considerations

September 17, 2024:

CARLI hosted: “Open Discussion on Government Documents Cataloging”

- Explored the effects libraries expected to see from changes and options, and opportunities for libraries to work together on solutions

September 24, 2024:

OCLC hosted: “[Receiving MARC records for your U.S. government document titles from OCLC](#)”

Investigation

October 24, 2024: CARLI announced it would

1. Create and manage a new collection in the Network Zone for “United States Government Documents”
2. Form a small, short-term working group to specify options for improving the metadata in the CARLI collection

Involvement

November 6 and December 17, 2024:

- CARLI Working Group held Zoom sessions. Participating libraries included:
 - DePaul University
 - Eastern Illinois University
 - Illinois State Library (Regional)
 - Illinois State University
 - Southern Illinois University - Carbondale
 - Southern Illinois University - Edwardsville

Discussion

- How to handle OCLC # match with imported records
- What to do about hybrid records in use
 - Bibliographic records for electronic form with physical holdings
 - Bibliographic records describing multiple forms
- Clear expression of electronic format
 - Identify and add the elements that express this in Primo VE

Resolution

January 28, 2025:

- CARLI announced the new Shared Network Zone Electronic Collection: United States Government Documents
 - Records supplied via OCLC's "U.S. Government Documents – Electronic" collection in WorldShare
 - Weekly data loaded (the standard for other OCLC Collections)
 - Individual institutions can opt out of using the shared collection
 - Deactivated the existing Community Zone Collection

Success

- Weekly import of new and updated records each Monday
 - Direct FTP and import from WorldCat to I-Share network
 - Records modified according to specifications
 - Update fixed fields expressing electronic format
 - Update 300 field for “1 online resource”
 - Include 33X fields
 - Verify presence of 856 with PURL
 - Filter out records lacking this

SPRING 2025 DEPOSITORY LIBRARY COUNCIL VIRTUAL MEETING

MAY 1, 2025 • #DLCVIRTUAL25

The USGS Bird Banding Lab (BBL) and Breeding Bird Survey (BBS): Catalyzing Discovery for More Than 100 Years

Through the BBL and the BBS, the USGS delivers the best available information to support bird management and conservation based on sound and objective science. These USGS bird programs are the foundation for effective bird management and conservation nationwide because they provide the longest, most definitive history of changes in North American bird populations. Together, these organizations enable resource managers to make informed decisions when incorporating the Migratory Bird Treaty Act, the North American Waterfowl Management Plan, State wildlife action plans, and other Federal and State initiatives into their work.

1918

The Migratory Bird Treaty Act was passed. The Act directed the creation of a federal bird banding program to aid long-term management of this important natural resource.

1920

The Bird Banding Laboratory (BBL) was established, and in 1923, formed the North American Bird Banding Program with Canada's Bird Banding Office, recognizing a shared stewardship responsibility for migratory birds.

1940s

BBL data were instrumental in identifying migration flyways, stopover sites, and wintering grounds, leading to the development of wildlife refuges and science-based bird population management.

1960s

Bird banding was a key tool in recognizing the decline of peregrine falcon and other species, spurring

1966

The Breeding Bird Survey (BBS)

was initiated in the U.S. and Canada. Since then, the BBS has tracked changes in continental bird populations to help keep common birds common for future

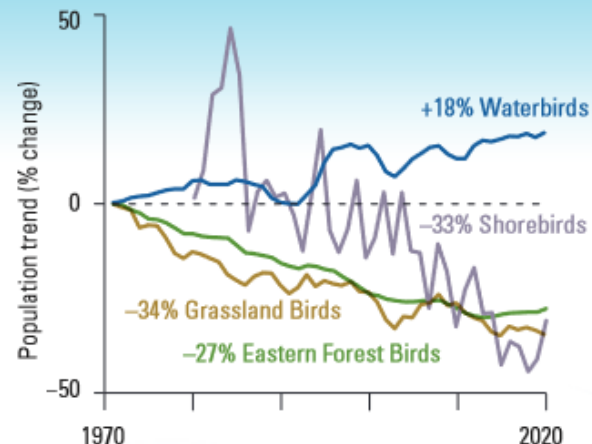

1995

USGS data became integral to protect U.S. hunting heritage as these data are used in the Adaptive Harvest Management model for waterfowl and harvest strategies for other birds.

1989

BBS data indicated widespread declines in many long-distance, migratory birds and demonstrated the need for international cooperation to conserve these species. This led to the establishment of Partners in Flight in 1990 and the Neotropical Migratory Bird Conservation

2000s–2020s

USGS scientists developed cutting-edge methods of analyses to model trends of more than 540 bird species across North America. Models increase the value of BBS data at management-relevant scales by accounting for variation in space and time and provide data for recurring *State of the Birds* reports, published by the North American Bird Conservation Initiative.

2025 and beyond
The BBL and the BBS plan to continually innovate to support management of birds as an economic driver, a cultural touchstone, and an ecological necessity.

2001

BBS data were incorporated to help improve safety in commercial and military flights as part of the U.S. Air Force's Bird Avoidance Model.

2022

Bird marking enabled USGS scientists to track movement of a wild bird infected with highly pathogenic avian influenza, which is key to understanding disease spread to poultry.

Observations

- No I-Share library has opted out of the shared collection
- Central collection is reducing duplication
- Centralized consortial-level service saves time and money for individual libraries
- Individual libraries lack management with duplicates
- Loss in not receiving reports of added titles(as had been the case with MARCIVE)
